

## Secure Cloud Based SCADA

### Remotely Monitor/Manage from Anywhere, 24/7

The Whisker.io® Cloud SCADA platform was built from the ground up to be intuitive and simple. The map drill down interface provides immediately overview of the status of all locations – click any location to load the HMI page for that location.

### Full User Control

It is designed to be managed by anyone with basic computer skills. Add and remove users, change user permissions, change alarm thresholds and settings, modify HMI screens (add/move/remote widgets), and setup dashboards in house – no need to pay an engineer to make changes.

### Roles-Based Permissions

Granular permissions allow you to control who can do what where with fine detail. All operations that require permissions are logged for auditing purposes. Activity logs can be viewed and downloaded in the cloud portal.

### Powerful Trend Analysis Tools

Build your own trend graphs, combining data from multiple locations into a single dashboard for comparative trend analysis.

### Smart Alerts

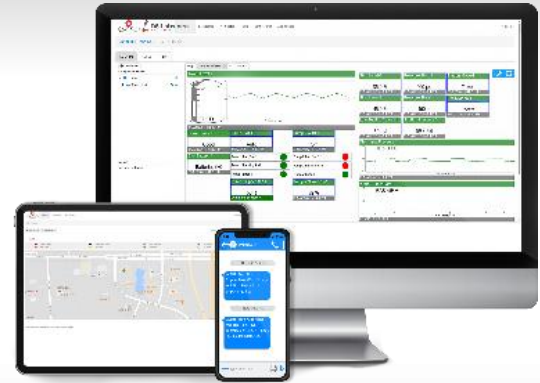

Intelligent alerting system uses historic data to qualify alerts, dramatically reducing nuisance alerts. Stack alerts at different thresholds with different notifications to elevate up the management tree if alerts go unattended. Notifications via text, email and voice dial out.

### 10 Year Data Storage

All data is stored a minimum of 10 years with our standard subscription. Additional storage term lengths are available.

### Web and Mobile Versions Available

Access the Whisker.io® cloud SCADA platform using our web portal and our new native mobile application (available on Apple and Play stores for iOS and Android). The mobile application provides an optimized user interface for smaller screens on mobile devices.

### Cloud Based SCADA

- Hosted in secure Microsoft Azure data center
- Auto-scaling architecture to meet peak demand
- 10-year minimum data storage
- 2 factor authentication available

### No Contracts

- Subscription is billed per year with no contract requirements
- Simple pricing model – one simple fee for data, storage, text messages, apps, etc.

### Web App

- Works on any modern device with an HTML5 compliant browser
- Add/remove users and set permissions per user
- Monitor and manage assets via HMIs and dashboards
- Create/edit alerts
- Audit user activity history – easily find who changed a mode, setpoint or alert and when

### WhiskerMobile™ App

- Available for iOS and Android
- Optimized for small screens on mobile devices
- Same capabilities as web app
- Enhanced HMI – compound widgets save screen space for things like pump controls
- Enhanced Graphs – Combine up to 6 trends per saved graph.
